A 22-year-old UC Berkeley student who had been missing since January has been confirmed by authorities to have died in Marin County.

Two sets of bones found on a beach in April were recently confirmed to have been a DNA match for [Shuqin Zhang](#), who disappeared about a week after New Year's, authorities said this week. Police described the young woman at that time as “missing and at risk” and were concerned for her mental health based on reports that she had been struggling with depression.

Competitors

Project M outperforms all the other emotional intelligence solutions.
